RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 208 pages. Original publisher: Reston, Va. : U. S. Geological Survey, 2009. OCLC Number: (OCoLC)385277199 Subject: Nutrient pollution of water -- United States -- Statistics. Excerpt: . . . Approach 5 can change at a site over the time period used in the trend within the watershed that led to the FA trend in concentration. analysis, resulting in changes in the timing and frequency Over enough years, the annual pattern of concentration in the of sample collection. The resulting data sets may exhibit bias stream will shift to generally lower values. FA trends in concentration can be complex, as there often that interferes with trend analysis. For example, an increase are multiple and possibly counteracting anthropogenic factors in sampling at high streamflows in support of stormwater-influencing nutrient source and transport in a watershed. For runoff evaluation during the latter half of the study period may example, population growth initially may lead to an increase in induce a trend that likely would be an artifact of the change in the nutrient load discharged from wastewater-treatment plants, sampling design rather than a true change in concentration. To but after several years, upgrades at the plant may lead to a deal with these limitations in the determination of NFA trends relative decrease in the nutrient load discharged. Or, a decrease in concentration, a coupled statistical modeling approach that in fertilizer use in agricultural areas of a watershed may lead simultaneously accounted for changes in streamflow and con-to decreasing nutrient loads in surface runoff, but population centration was used in this study. growth in other areas of the watershed may lead to an increase in the nutrient load discharged from wastewater-treatment Trends in Load plants. These multiple changes are not always counteracting;...
